TUGAS 2

SOAL 1

The screenshot shows the DartPad web interface. The code editor on the left contains the following Dart code:

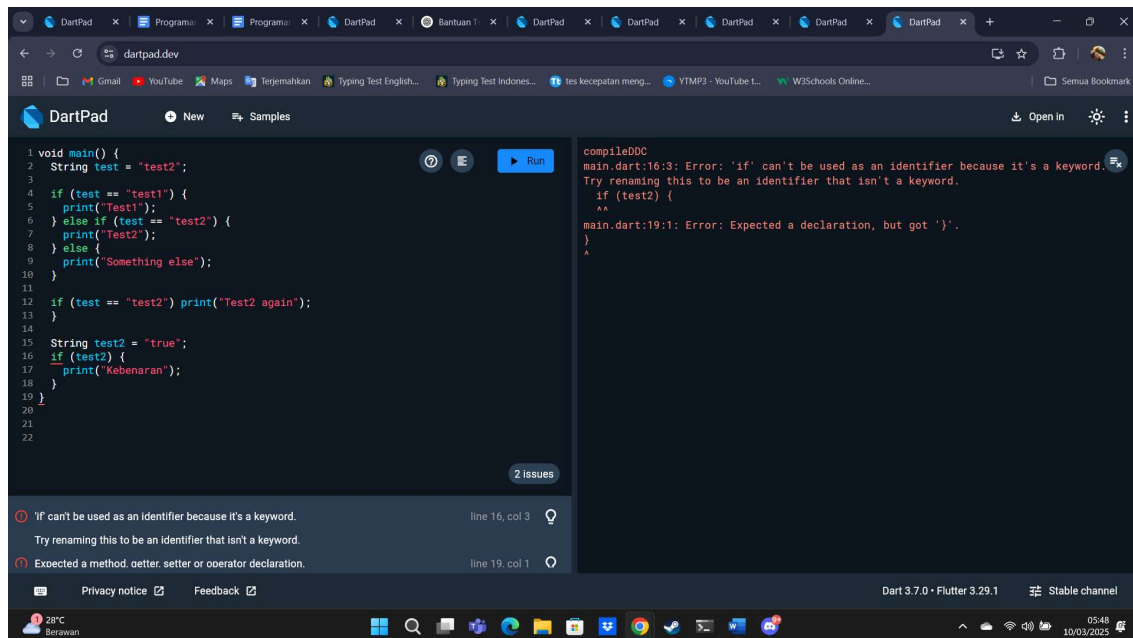

```
1 void main() {  
2   String test = "test2";  
3  
4   if (test == "test1") {  
5     print("Test1");  
6   } else if (test == "test2") {  
7     print("Test2");  
8   } else {  
9     print("Something else");  
10  }  
11  
12  if (test == "test2") print("Test2 again");  
13 }  
14  
15  
16  
17
```

The output pane on the right shows the results of the program execution:

```
Test2  
Test2 again
```

The bottom status bar indicates "Dart 3.7.0 • Flutter 3.29.1" and "Stable channel".

Behasil berjalan tanpa error

The screenshot shows the DartPad web interface with the same code as the previous image, but with additional code added at the bottom:

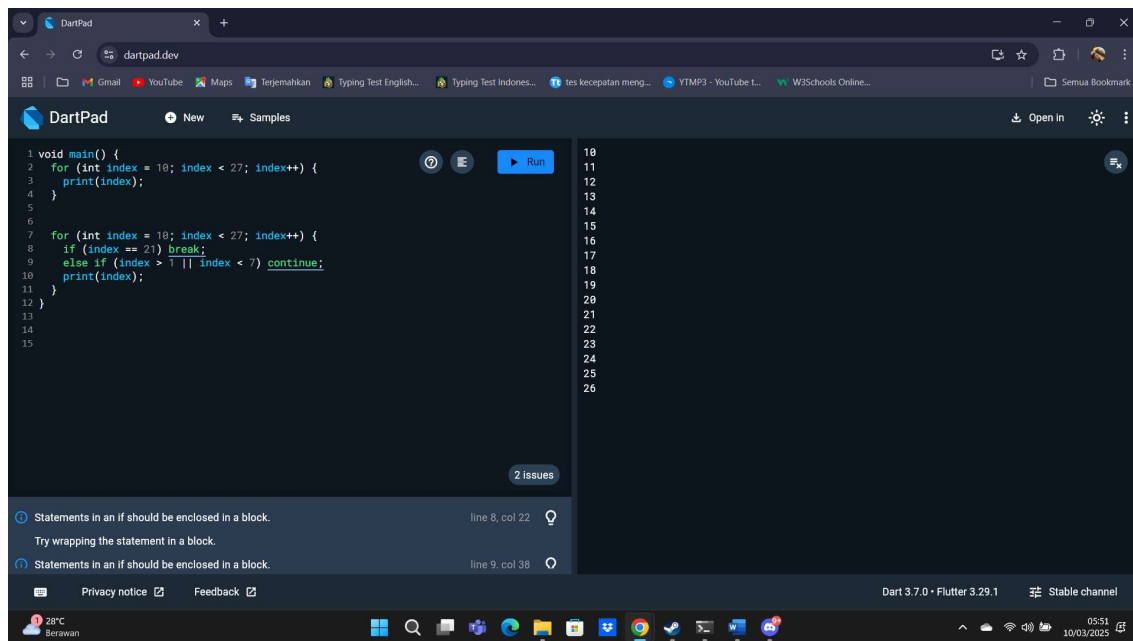

```
15 String test2 = "true";  
16 if (test2) {  
17   print("Kebenaran");  
18 }  
19 }  
20  
21  
22
```

The output pane on the right shows the following error messages:

```
compileDCC  
main.dart:16:3: Error: 'if' can't be used as an identifier because it's a keyword.  
Try renaming this to be an identifier that isn't a keyword.  
  if (test2) {  
  ^^  
main.dart:19:1: Error: Expected a declaration, but got '}'.  
}  
^
```

The bottom status bar indicates "Dart 3.7.0 • Flutter 3.29.1" and "Stable channel".
